PAGE BUILDER PROPOSAL

Introduction

Most Content Management System(CMS) available today, display the contents that are not really focusing on what the user's need and there is no form of video training session for users to know the way around the entire system and not getting confused on what to do leading to a few people capable of making updates to the app. For my project, I propose the development of a pagebuilder application for Joomla which provides the user with a better overview and knowing what Joomla is all about. The page builder application focuses on the content the users need to create. Also the page builder will have categories of users if users could be student or lecturer or entrepreneur etc.

If my project is accepted I would love my mentor to be inspiring, help me grow, non judgemental, a good listener, honest and flexible.

Objectives

- To provide an easy understanding of Joomla based on a video training session that is provided
- To provide an interface to satisfy the user based on their own content they have chosen..
- To improve the app making it the best content management system in the world.
- To save time in creating a content.

Target Customers

- Students – In addition to busy schedules in making their own content faster eg blog or website.
- New Customers – When new customers come in they are satisfied and not confused about what they want to do in the app.

Value Proposition

The application fills the need of the user having to think or look into other websites for an idea to create their own content.

Application Features And Description

It requires users to sign up and login and access tools and material based on the page builder. The user gets logged in, and sees a pop up of the training session so they know what to do and where to go. After the training session it then redirects the user to fill a form based on the user's interest. The user provides the following information to build a comfortable content.

Familiarity with Joomla

I am not yet familiar with Joomla but I hope to use the application period to increase my familiarity with Joomla.

Involvement with Joomla Community

I am new to Joomla and I plan on helping others in the community with any issues they have and looking forward to fixing any issues I come across with the platform. Besides working on the project I also expect to remain involved with Joomla after completion of the project by bringing up new ideas that would move the company forward and I hope to use the application period to increase my familiarity with Joomla.

My Participation in the Google Summer Of Code with the Joomla project

I agree to the successful completion of this project and to the Joomla code of conduct
